

THE CITY OF AMARILLO TEXAS APPROVES A NEW SPECIFICATION HDPE PIPE

ENGINEERED TO OUTPERFORM

Superior Engineering:

ADS and Hancor produce N-12® and BLUE SEAL® superior HDPE pipe that provides the strength needed for tough applications. These pipe products offer the best watertight joint in the industry. They offer abrasion resistance and won't rust or corrode like concrete or steel.

Advanced Drainage Applications:

HDPE pipe and fittings are used for cross drains, side drains, storm sewers, culverts, landfills and other installations across the country. Pipe and fittings are available in a wide range of sizes from 4" to 60" diameters for flexibility in all your projects.

In December 2008, the City of Amarillo Texas approved a new specification for ADS and Hancor HDPE pipe for city stormdrain applications in diameters greater than 18". Pipe must be manufactured in accordance with ASTM F2306. Water-tight joints are required and the backfill must be Class I or II material (per ASTM D2321) to 6" above the pipe. Installation must be in accordance with ASTM D2321 and the contractors must be certified by the manufacturer and provide city with copy of certificate to be included on approved installers list. A video camera inspection will also be required for installations.

Easy Installations:

The rugged, lightweight design of N-12 and BLUE SEAL makes them easier and more cost-effective to install. They require fewer people, less time and less heavy equipment to install compared to traditional material installations. All of these advantages add up to lower installation costs.

High Performance Joints:

The watertight joints on N-12 and BLUE SEAL pipe do not require any extra couplers, grout or other sealants due to the patented, factory-installed gaskets. The integral bell and spigot joints on these pipes improve the tolerance control and integrity of the watertight seal.

Outstanding Value:

N-12 and BLUE SEAL have many performance advantages over traditional pipes...at a fraction of the cost.
