

HENRICO COUNTY, VIRGINIA APPROVES BAYFILTER™ FOR STORMWATER TREATMENT

ENGINEERED TO OUTPERFORM

Given the NJDEP Interim Certification, Henrico County considers the BayFilter by BaySaver Technologies, Inc. an acceptable stormwater quality BMP with a removal efficiency for TP of 53%.

Superior Engineering

BayFilter is the most efficient, effective, economical, and easy-to-use stormwater treatment filter on the market today. The BayFilter system utilizes well proven sand filter principles to remove pollutants such as sediments, oil, metals, organics and nutrients.

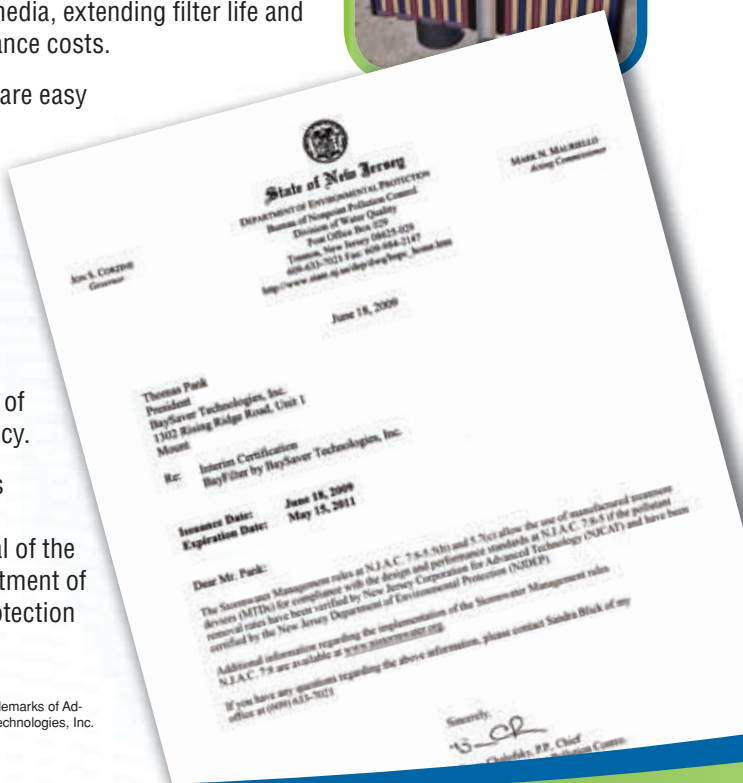

Superior Performance

Utilizing concrete (manholes, pre-cast, or cast-in-place) vaults, an easy-to-handle cartridge design, a mixed media sand filter, and a proprietary spiral wrapped layered construction, BayFilter removes very fine sediment and nutrient pollutants at an astounding maximum flow of 30 GPM per cartridge. The unique design provides backwash of the media, extending filter life and reducing maintenance costs.

BayFilter systems are easy to specify, install and maintain and are fully customizable.

The recyclable cartridges remove turbidity, oils, nitrates and other pollutants at rates of up to 80% efficiency.

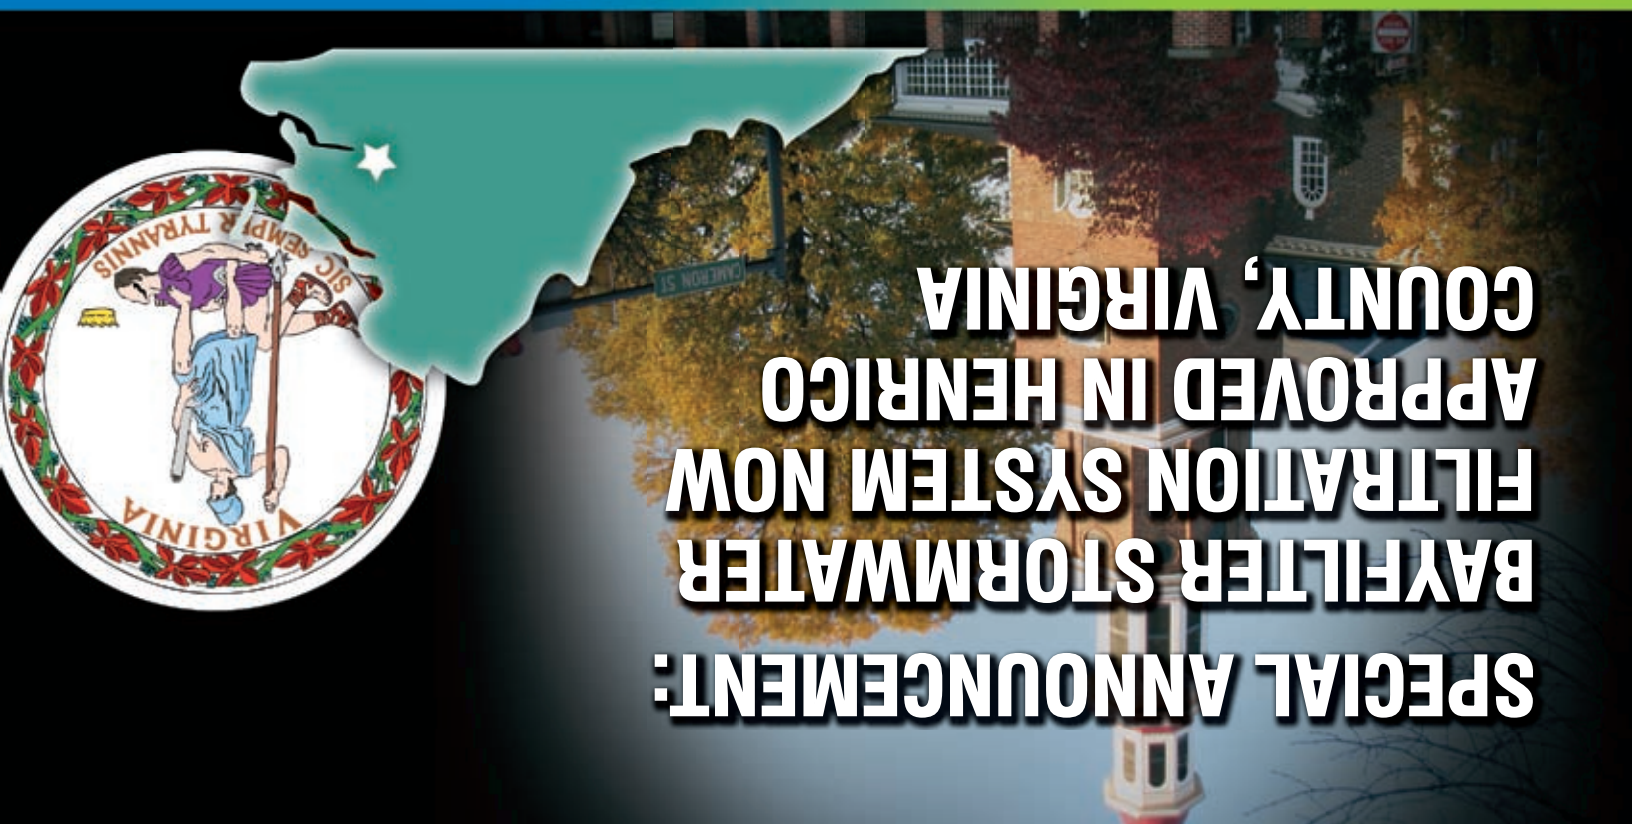

County approval is contingent on the continued approval of the New Jersey Department of Environmental Protection (NJDEP).
